If you would know the Interest of 100 l. for one Month, two Months, three Months, six Months, nine Months, or one Year, look for 100 l. in the Side; and in the next Column, under 1 Month, is 8s. 4d.; for 2 Months 16s. 8d.; for 3 Months 11. 5s.; for 6 Months 21. 10s.; for 9 Months 31. 15s.; and for a Year 51.; and so of the rest.

This is the honest Way by which Men should

To Interest let their Silver and their Gold;

Yet worldly Misers, when to raking fall,

They with their Interest get the Devil and all.

P R E F A C E.

QUID est futurum cras, fuge querere; and *Post est Occaso calva:* Two Sentences, the one delivered by Horace, and the other by Cato, Authors of no small Note and Antiquity; if adhered to, leave us, I must needs say, so small a Scope for Reflection, that it is hardly worth a prudent Man's while to think at all: for if we are to neglect enquiry into what may happen in Future; and as Time past cannot be recalled, so it is vain to think of it; then the present Moment is only worth our Notice: and really were this an Article of my Creed, what better Advice could I give than the following to every Son and Daughter of Adam,

Let us eat and drink, for to-morrow we die.

Or what could further be said to the Soul, when, arrested by the cold Hand of Death, she is quitting the Limits of Time, and launching into the boundless Ocean of Eternity, than the following

Lusisti satis, edisti satis, atque bibisti;

Tempus abire tibi est.

And indeed if this be the fair Estimate of Human Life, well might the Poet say,

Happy the Babe, who privileg'd by Fate,
To shorter Labour, and a lighter Weight,
Receiv'd but Yesterday the Gift of Breath,
Order'd To-morrow to return to Death.

But my kind Readers are of another Stamp, and look upon Life as no such ludicrous Matter. They and I are very sensible, that examining into what is past, whether transacted by ourselves or others, leads us to just Conclusions for our Conduct in time to come. That the Current of our present Knowledge runs to us through the Channel of Antiquity, and if we are in any Degree more learned than our Forefathers, we have them to thank, not only for the Foundation, but also for a great Part of the Superstructure.

And yet this Knowledge, this Wisdom, which is consonant both to Reason and Scripture; this insight into the two Tenses, Past and Present, I will make bold to assert will be of little avail in our Journey through Life, if we are not to look forward as well as backward, and snatch every possible glance behind the Curtain of Obscurity which hangs between us and the Days to come. Little avails it me to have the distant Hills pointed out, to which I am travelling, if I am not allowed to explore the Road that leads to them: yet this every one in fact does, who decries the Means Providence has given, and our venerable Forefathers have ever made Use of, to guide their future Steps with

cau-

caution and safety through the various windings and turnings in human Life.

Divines daily press these Documents upon us in all Cases which concern our immortal Souls, and our everlasting woe or welfare; and certainly they do it with the greatest Reason. And while we have the happiness of enjoying the holy Scriptures *in lingua materna*, every one is furnished with a sufficient answer in defence of our Art.

Cast thine Eyes, O Man, upon the vast Expanse; behold with astonishment the arched Vault: behold the glittering Train of celestial Luminaries shining in the most magnificent splendor; and why walk the Wanderers their appointed Round, while the others are fixed firm as the everlasting Hills? Say not, for Signs of Wrath and Displeasure, or portents of Peace and Happiness, they are not placed. Presumptuous Man, darest thou to set bounds to Omniscience, and say to Omnipotence, "Thus far shall thou go and no further!" Firm stands the record of Truth, that they should be for Signs and for Seasons—*and Days and Years*, in spite of human ridicule, will confirm it.

Methinks so long as the Earth takes its annual circuit round the Sun, and the Moon glides on in her monthly Orbit; the Seasons might remain, though the other Planets were extinguished from the System. But they were for Signs; hence we find the inspired Writer says, "The Stars in their Courses fought against Sissera." But our wise Antiastronomers say, the Stars in their Courses did not fight against Sissera, and had no more to do in the Affair than you or I have.—Now it is very plain to the meanest Capacity, that when two Assertions are diametrically opposite to each other; one at least must be false. But let God be true, though every Man be a liar.

But you and I, my serious Friends, have not so learned the Word: when we traverse the solitary Walk for serious Contemplation, let us keep a calm Intercourse with the sidereal Messengers, and listen attentively to their silent Lectures: for *the invisible Things of him from the Creation of the World are clearly seen, being understood by the Things that are made*; because he, who made the Stars, has said, *that there is neither Speech nor Language, but their Voices are heard among them: their Sound is gone out into all Lands, and their Words unto the Ends of the World.*

My good Friends, adieu!—Remember what is written in the Records of eternal Veracity; *The Heavens declare the Glory of God, and the Firmament sheweth his Handy-work.* And in spite of the gibes and the jeers of the silly Humourists of an idle hour, *Who is wise will ponder these Things; and they shall understand the loving-kindness of the Lord.*—Once more adieu! I am your loving Friend,

F. MOORE.

J A N U A R Y XXXI Days.

When from the barren frozen North,
With ail his Wintry Stores,
Big-mouth'd Boreas bustles forth,
Stella, we'll bar the Doors;
The Windows close, the Fire repair,
And light a Constellation there.

The Tempest howls ; the hollow Breeze
The echoing Rocks rebound ;
While whistling through the naked Trees,
He Horror spreads around ;
Now shut from the inclement Sky,
Where Nature fails, let Art supply.

JUPITER is an evening star till May 24, then a morning star till Deca

Now through the Grove the tuneful Throng,
 See shiv'ring seek around
 For scattered Pittance all day long
 Upon the barren Ground,
 Stern Winter chills their genial Fires,
 Nor Love their tender Notes inspires.

APRIL, XXX Days.

But now the Sun, to northern Skies
 Repairing once again,
 Does later set, and earlier rise,
 And gladdens all the Plain.
 Cease, Warblers, cease your plaintive strain,
 Soon shall ye hop and sing again.

 Again shall bounteous prove,
 And you once more shall bill and sing
 Your little Notes of Love ;
 While joyfully with warbling Throats,
 You chant to Heav'n your dulcet Notes.

 As Sol does downwards ride;
 Autumnal Breezes chill the air;
 And cool the Eventide.
 Adieu the Gambols of the Green,
 Autumn prepares to quit the Scene.

Stern Winter now again appears,
 In all his grim Array ;
 Pale is the Face that Nature wears,
 And dim the Eye of Day.
 Again the clouded Welkin scouls,
 Again the big-mouth'd Tempest howls.

LAST Quarter 2 day, at 10 morn.

It is a Question very natural to suppose an enquiring Mind desirous to ask, — What do you think of the New States in America? I answer by putting another Question: --- What do they think of themselves by this Time? If you ask me as an Astrologer, I answer before the Year will have advanced NEW Moon 9 day, at 10 night

to this Period, they will have had Trouble enough among themselves: Mars with the Pleiades, says an eminent Artist in this Science, betoken Murmuring, Discontent, opposing Authority, ripe among the Dregs of the common People; and though I dare not say that England will be free from the Infection; yet I know no People in the World to whom it is more applicable than to the

French have any Reason to rejoice. They may in Time become a great People; but like Pilgrims sojourning to the Canaan celestial, they must pass through many and great Tribulations. But this kind Reader is nothing to us; as before that Day, we shall be nothing to any body.

Here may we see as in a Glass,
 As Hours and Minutes roll,
 The varying Seasons as they pass :
 This Lesson to the Soul,
 Shews clear for penfive Mortals each to scan,
 That one short Year holds forth the Life of Man.

| h ♀ | 56 | 2 | Head of Andromeda | 10 42 | 10 10 | 2 56 |

THE brightest of the seven stars is of the third magnitude, and hath 61 degrees of meridian altitude, and in colour participates of the ♀ and ♂.

The fixed stars all rise, South, and set about four minutes sooner every night than they did the night before; this considered, the exact time of rising, Southing, and setting for any intermediate night, not herein noted, may be very easily deduced from these tables, by inspection only.

To know the time of rising, Southing, and setting of any star in this table, for any day required; it is but considering how many hours and minutes that star rises, Souths, or sets, either before or after the seven stars on that day, and you will have your desire; observing that in this table, a stands for *after*, and b for *before*.

P R O E M.

R E T I R E M E N T.

REMOTE from hurry, care and strife,
 Give me, ye Gods, a country life:
 When Summer burns, near cooling streams,
 Where shady groves obstruct his beams.
 Come Contemplation, gentle maid,
 And see me there supinely laid;
 Inspire my soul, and lend thy aid.

Then while I stretch me on the ground,
 And see all nature blooming round,
 With strict attention let me view
 Each tender herb that sips the dew;
 Whate'er its form, whate'er its dress,
 Its virtues let me rightly guess,
 To help my neighbour in distress.

When Winter comes, I'd quit my bow'r
 For some high antiquated tow'r;
 Or else be this my humble lot,
 Some comfortable country cot;
 Nor holy contemplation from
 My cot depart, but tell the doom
 Of ages past, and years to come.

Thus let me live; thus may I die,
 Preparing for futurity:
 For that most solemn day to come,
 When I must take my final doom.
 And when at last I quit this clay,
 Angels conduct my soul away
 To endless light, eternal day.

Of the ECLIPSES for the present YEAR, 1787.

WITHIN the revolution of the present year there will be six eclipses, three of each luminary; three of which will be visible entirely; two invisible, and one visible in part; of which take the following calculations as they come in course of the rolling year.

The first is a visible Eclipse of the Moon, on January 3, at night, as follows:-

| | h | m | |
|--|----|----|--------------|
| Beginning - - - | 10 | 0 | P. M. |
| Beginning of total darkness | 10 | 58 | |
| Middle - - - | 11 | 47 | |
| End of total darkness - | 0 | 37 | Jan. 4, mane |
| End of the Eclipse - - | 1 | 35 | mane |
| Digits eclipsed $20^{\circ} 56'$ from N. side of \oplus 's shadow. | | | |

The second will be a small but visible Eclipse of the Sun on January 19, as follows:

| | h | m | |
|---|----|----|------|
| Beginning - - - | 9 | 54 | mane |
| Middle - - - | 10 | 33 | |
| End - - - | 11 | 12 | |
| Digits eclipsed $1^{\circ} 17'$ on sun's northern limb. | | | |

The third will be a visible Eclipse of the Sun on Friday June 15, in the afternoon, as follows:

| | h | m | |
|---|---|----|-------|
| Beginning - - - | 4 | 11 | P. M. |
| Middle - - - | 4 | 56 | |
| End - - - | 5 | 47 | |
| Digits eclipsed $5^{\circ} 24'$ on sun's northern limb. | | | |

The fourth is a total Eclipse of the Moon, although invisible to us, happening on June 30, about noon, as follows:

| | h | m | |
|--|---|----|-------|
| Beginning - - - | 0 | 43 | P. M. |
| Beginning of total darkness | 1 | 59 | |
| Middle - - - | 2 | 34 | |
| End of total darkness - | 3 | 10 | |
| End of Eclipse - - | 4 | 26 | |
| Digits eclipsed $14^{\circ} 27'$ from N. side of \oplus 's shadow. | | | |

The fifth will be an invisible Eclipse of the sun on the 9th of December, 8 at 4 hours 11 min. in long. 8 hours 17 deg. 36 min. D's lat. 47 min. and a half South. The sun will be centrally eclipsed on the meridian at 4 hours 20 min. in long. 65 deg. West, and lat. 84 deg. South.

The sixth and last Eclipse, in the circle of this year, will be of the Moon, and partly visible as follows:

| | | h | m |
|-------------------------|---|---|----------|
| Beginning Dec. 24, at | - | 1 | 42 P. M. |
| Middle | - | 3 | 7 |
| Sun sets and moon rises | - | 3 | 52 |
| End of the Eclipse | - | 4 | 32 |

Digits eclipsed $9^{\circ} 18'$ on the moon's northern limb.

Not to trouble my worthy readers with too much loquacity upon the present subject, I shall only animadvert upon the first of these Eclipses, being the principal one; and then proceed in my accustomed manner through the following pages. This Eclipse is celebrated in *os*, a sign of the watry triplicity, being in $13^{\circ} 38'$ thereof. If I may venture at the prognostication of one of my predecessors in this performance, it will be but honest to give it in his own words.—It foreshews cold foggy weather, with much snow or sleet; also great rains, floods, and inundations; storms and tempests at sea, and sometimes inroads of foreign armies, and confusions in states and governments; also murmurings and discontents, if not tumults and insurrections among the common people. This Eclipse falls in the tenth house or angle of Honour, therefore the rulers and grandees of those several countries concerned in the effect of this Eclipse, will mostly feel the smart thereof, some of those places are Scotland, Holland, Zealand, Prussia, Venice, Genoa, and Constantinople.

I for my own part am not fond of these tidings; but what has been, will be, says Solomon, and there is no new thing under the sun. I cannot conclude this chapter without giving a quotation from an ancient and celebrated author, as it is applicable to the present time.—*Fiunt in mundo multa incommoda quando erit in uno mense utriusq; luminaris Eclipsis, & præcipue in his locis, quibus est significatio eorum specialis.* The plain English of which is, that there shall many troubles happen in the world, when both the luminaries shall be eclipsed in one month; and especially in those places where there is a special signification of them.

Vide Hermes Centiloquii enunciato.

I observed

I observed in my last production, that the Almighty had at sundry times, and in divers places, different modes of communicating his will, and revealing what his divine wisdom from time to time chose to make known to the children of dust.—I thought it might not be foreign to my purpose to enumerate some of the many ways that, from the best authorities, might be quoted, by which mankind, conscious of their own blindness, have been accustomed to seek for intelligence into futurity; as it produces a plain testimony from the manners and opinions of all ages, that there is a superior Being, who governs the vast fabric, knows the whole mechanism, and has every mutation in his hand; and to whom the faint, the sage, the savage, and all rational beings (for the sceptic I exclude from the number) in all distress, in all doubts and perplexities, look up for guide and assistance.

“ Conscious of guilt to thee they fly,
 “ And lift the hand, and raise the eye;
 “ Nor will their God refuse to hear
 “ Their ardent wish in humble pray’r.”

The answers which have been recorded in the historical page, are undeniable proofs that there is a God, that his eyes look down upon the children of men, and his mercy is extended over all his works; that he giveth wisdom to the simple, and knowledge to him that lacketh understanding.

The subject of my present limits shall be, that now exploded method of communicating the knowledge of what shall be hereafter, I mean dreams. Not a man in the world is perhaps more averse to believe any of the idle productions of a roving fancy than myself; yet let the thing speak for itself, let us give a fair hearing to what has been said upon the subject; and not content with plausible conjecture, let history, sacred and prophane, guide our faculties, while we read with judgment, and determine with caution.

We shall begin with prophane history. To quote all the authorities from which, that might be produced, would take much more room than the whole paper allowed to this annual register of time would admit of. Suffice it to mention some from good authorities, and then proceed to those of divine establishment.

Justin tells us at large the story of Astyages, the grandfather of the great Cyrus; how he saw in a dream a vine springing

springing out of the womb of his only daughter, the branches of which overshadowed all Asia. That the Soothsayers being consulted, answered, that that individual daughter should have a son, whose greatness was foretold, and that the loss of his kingdom was portended. This, notwithstanding his barbarous precaution by delivering him to Harpagus his friend and privy-counsellor, to be slain, was verified in the person of Cyrus. The venerable Plutarch too will furnish many instances of the like nature. And the story of Josephus upon Alexander's entry into Jerusalem, (upon which Calmet is very large) is so much to the purpose, that I am tempted to give it. When Alexander was going with great indignation against the Jews, he was met by Jaddus the high priest in his pontificals, with all the other priests in their proper vestments, and the Levites in white. That to the astonishment of his numerous followers, Alexander bowed himself to the ground before the priest, and worshipped the God whose minister he was, and whose venerable name he bore in his forehead, declaring that the king of the Jews had thus appeared to him in Macedonia, and promised him the conquest of the Persian empire. Vide Calmet. Rollin's Belles Lettres. Jos. Hist. Jud. lib. 11. cap. 8. &c.

There are many others well authenticated, and truly entertaining, which at this time we must defer.—The sacred book of the Old Testament has so many striking proofs of the Almighty communicating the knowledge of things to come in dreams and visions of the night, that none but an infidel dare contradict it. Read the 15th chapter of Genesis, and you will there find the fate of Abraham's seed predicted to him for more than four hundred years to come; and which was exactly verified, as appears by the scripture-history of that people.—Ask you when or how? the text plainly informs you. “When the sun was down, a deep sleep fell upon Abraham, and lo a horror of great darkness fell upon him;” for the rest I refer to the sacred volume itself. I have much more upon this subject, which, if God permit, at another time I shall treat more largely. Till then let us keep the golden mean; not foolishly imagining every idle representation of a bewildered fancy to come from God; nor yet impiously denying those whose veracity the holy scripture has affirmed, or the records of history proved indubitable.

Proceed we now to an hieroglyphic which I doubt is too well adapted to the present age. St. Vincent, a Dominican Friar,

Friar, in his treatise on the fall and ruin of the spiritual life, on the diminution of the ecclesiastical dignity, of the failing of the Catholic Faith, and of the coming of Antichrist, has these words.—Nor, says he, are our prelates full of pride and vanity, of pomp and simony, of avarice and luxury, placing religion in the quantity and weight of earthly things, and caring but little for the true gold of the church; insomuch that the religious orders are become to men's souls the way to perdition, which ought to be the way to salvation, while the priests hunt and fish after preferment and honour, and not after honest manners and godly living. This was spoken, I allow, by the good father against the church of Rome; but as experience has verified Dryden's words, that priests of all religions are the same, there is reason to fear that too many who have thrown aside the errors of Papacy, have crept into the ministry with no other view than a lucrative one, and lord it over Christ's flock with no other merit than what they pretend to derive from their function. To these, and these only, the hieroglyphical picture, drawn by the hand of ANDREAS ALCIATUS, truly belongs, and to them alone it is dedicated.

ISIDIS effigiem tardus gestabat asellus,
 Panda verenda dorso habens mysteria.
 Obuius ergo Deam quisquis reverenter adorat,
 Piasq; genibus concipit flexis preces.

PROGNOSTICATIONS. 45

*Ast asinus tantum præstari credit honorem
Sibi, & intumescit, admodum superbiens :
Donec eum flagris compescens, dixit agaso,
Non es Deus tu, aselle, sed Deum vobis.*

For the benefit of my honest country readers I have attempted a translation as follows :

While the image of Isis proud Balaam bears,
He brays with contempt, and he pricks up his ears ;
And thinks that the people, all prostrate before him,
Take him for a god, and all kneel to adore him :
But blows and reproaches are all that he gains ;
And he finds, at the last, he's an ass for his pains.

Observations upon the Four Quarters of the YEAR.

Of the WINTER QUARTER.

This quarter, commonly called the Brumal or winter quarter, commences on the 21st day of December at 33 min. after 2 in the afternoon ; at which time the celestial charioteer enters the first scruple of Capricorn, a melancholy sign of the earthly triplicity ; and now as the poet sings,

“ The sun from far peeps with a sickly face,
“ Too weak the clouds and mighty fogs to chace,
“ When up the skies he shoots his rosy head,
“ Or in the ruddy ocean seeks his bed.”

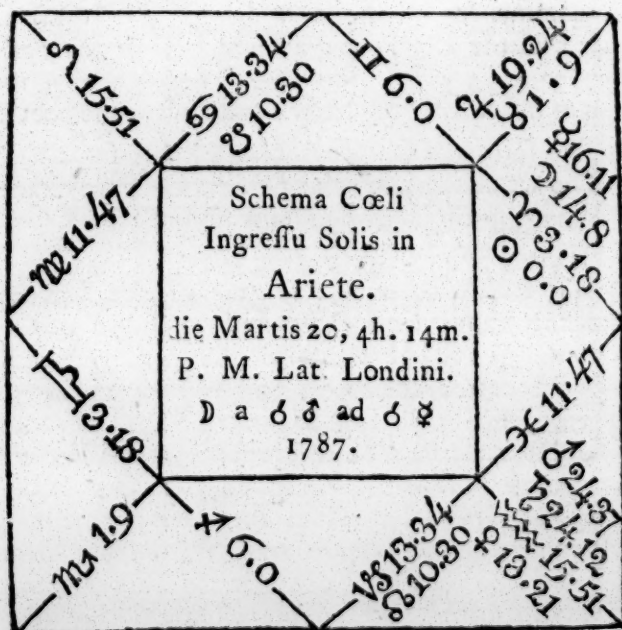

They who please to erect a scheme of the heavens, adapted to the above time, will find 11 deg. of Gemini ascending, and 6 deg. of Aquarius culminating, Venus and Mercury both retrograde in 12, and Jupiter ret. in 8 ; D quitting a conjunction with O, is in trine with ♃. In this quarter expect many deliberate councils, and deep consultations, in the cabinets of the mighty ; whether solid conclusions or not are drawn from the premises, time itself must determine ; but as action and reaction are always a counter-balance to each other, where the designs of one nation are only surmized, the counteractions of the other are only conditional ; preparation for the worst however is good policy, and the busy mind will find work enough to ruminate upon.

As

As to the weather, I fear in many places infirmities and bodily distempers will too much abound; yet although there may be shrewd conjectures for the particular months from the sun's ingress in Capricorn, to his advent in Aries, yet nothing that carries the bold face of infallibility, is at all warrantable: since the state of the air is not uniform in all places in the same kingdom, province, or even county; but is strangely different in regard to the difference of weather in various places at the same time, which difference may be in some measure attributed to the quality and situation of the place; from which cause likewise experience has long since determined one part of a nation to be the seat of health, while another is found to be the parent of agues, and various other disorders. But we proceed now to

The SPRING QUARTER.

Which begins on the 20th day of March at 4 hours, 14 min. P. M. when the Sun enters upon Aries, for which time the following scheme is calculated.

In this scheme we have 6 deg. of ♄ culminating, and near 12 deg. of ♄ ascending. Venus with the two superior planets ♂ and Saturn are under the earth. Saturn and Mars

PROGNOSTICATIONS. 47

being in conjunction nearly, ♃ just departed from a ♄ with ♄ is entering upon a ♄ with ♄, and if we examine the planets fortitudes we shall find ♄ predominant. What can't be cur'd must be endur'd; and if the aspects in the present face of the heavens appear but gloomy, hope, which springs eternal in the human breast, will point out happier days and a more pleasing figure in their peregrination, when the cœlestial wanderers shall have danced themselves into a good humour, and look down upon us with a propitious smile. After all, supposing the present year loaded with tribulations, as methinks there are few without their share; yet he who upon inspection of the above finds any particular share of troubles denounced against these British isles, I must needs say, sees further into the scheme than I do; great preparations perhaps are made, possibly great preparations are necessary, and he who should always be ready to strike, will never, when the iron is hot, have his hammer to seek. The grand cement of society is unanimity: let our rulers act as one man for the good of the nation, and may we in our several stations hang together in unity, peace, and concord. In the mean time may there not be a cord wanting for the enemies of our happy constitution; and I heartily wish it may be a strong one.

Of the SUMMER QUARTER.

This quarter commences on the 21st of June at 2 hours 6 min. P. M. when 30 deg. of ♊ are in the M. C. and 22 deg. 38 min. of ♋ ascend. The position of the planets betoken no great good: the moon enters a conjunction with Saturn, and he is retrograde. I will here make free to mention a stanza in Nostradamus, which appears to me to point at the western world.

Au grand empire par viendra tout un autres,
Bonté distant plects defelicite,
Rege par un issu non loing du peautre
Corruer regnes grande infelicite.

To the great empire quite another shall come,
Being further from goodness and happiness;
Governed by one of base parentage,
The kingdom shall fall, a great unhappiness.

Vide Cent. 6. Stanza 67.

The AUTUMNAL QUARTER.

This begins September 23, at 3 hours 47 min. mane, when 29 deg. of 8 culminares, and 6 39 μ ascend. Saturn is the surly lord of his own house, and still is retrograde; the various aspects having been before noticed, a repetition here is needless. I well know that in the eyes of many readers I have not been sufficiently explicit; but, *qui sapit tacet*. Astrology has suffered more by pretended admirers, and false professors, than by any set of men whatsoever. The art I believe under God is infallible, but so are not the artists. The destruction of antichrist, the downfall of the whore of Babylon, the desolation of Mahomet, and the conversion of the Jews, are subjects truly pleasing to a Protestant ear, and what we have all the reason possible to expect. But the how and the when are known only to the supreme disposer of all. In the fluctuating scenes of this transitory life, nothing permanent is to be found. 'Tis by the observation of the presages of heaven in former ages, and the history of the world in times past, that we have the opportunity of the least glimpse into futurity. But here astronomy, chronology, and history must go hand in hand, assisted by their help-mates geometry and geography, to form the true astrologer: but how few have attained to these, let the public judge. I wish the peace and welfare of my native isle to be flourishing and permanent; and to this great end my constant prayer has been against divisions at home. Yet I know mutations will happen; thus has it ever been since the foundation of the world, and thus it will be till its final dissolution. One generation passeth, and another cometh. The founders of empire are mouldered to dust, and the renowned nations of old are sunk in oblivion; as our forefathers were, so are we: as they are, soon shall we be, and glide away to make room for a succeeding generation. Let us therefore wisely in time look beyond the fading scenes of this transitory life, to a house not made with hands, eternal in the heavens. So that when the tempest of trouble descends, the winds of adversity blow, and the floods of affliction break in upon us, we may be enabled to stand, and our faith and hope fail not, being built upon the rock of ages. Amen.
